

RAVI K GUPTA

Senior Go + Next.js Specialist • Real-Time Web Apps & Microservices

Email: dev.ravikgupt@gmail.com • Location: Delhi, India • Mobile: +91-8285893766

LinkedIn: linkedin.com/in/ravi-k-dev • GitHub: github.com/devravik • Portfolio: devravik.github.io

EXECUTIVE SUMMARY

Full Stack Engineer specializing in high-performance web applications built with Go (Fiber) microservices and Next.js (App Router, React) frontends.

Experience includes real-time audio streaming platforms (TalkBridge), AI analytics engines (RedditRadar), and SaaS analytics tools (Genexr Analytics). Proficient with WebSockets, WebRTC P2P streaming, PostgreSQL, Prisma, and in-memory Redis caching.

Focuses on keeping API latencies low, UI components clean and responsive, and deployments simple with Docker and self-hosted infrastructure.

TECHNICAL SKILLS & COMPETENCIES

BACKEND & ARCHITECTURE

Backend architecture and system design, Data modelling for real-world, messy domains, Tenant isolation strategies (shared and isolated), Horizontal scaling and performance tuning, Background processing pipelines and queues

LANGUAGES & FRAMEWORKS

PHP / Laravel, CodeIgniter, WordPress, Go (Golang, Fiber), JavaScript / TypeScript, Python (FastAPI), Node.js

FRONTEND & APPS

Vue.js, React, Next.js, React Native (Expo), Statamic

DATA & SEARCH

Relational database design (MySQL, PostgreSQL), Query optimisation and indexing, Analytics / reporting data models, Algolia, Meilisearch / Elasticsearch, Supabase, Neon

CLOUD, DEVOPS & RELIABILITY

AWS (S3, EC2, SES, RDS), DigitalOcean, Vercel, Docker & containers, GitHub Actions / CI/CD, Netlify, Caching layers and Redis, Observability and application monitoring

AI & DEV TOOLS

Claude (Anthropic), OpenAI / GPT-4o, DeepSeek, Cursor, OpenCode, Ollama (local LLMs), LangChain, Google (Gemini)

EDUCATION & ACADEMIC QUALIFICATIONS

Bachelor of Technology (B.Tech.)

2008 - 2012

Uttar Pradesh Technical University

Intermediate (Class XII)

2008

Board of High School and Intermediate Education Uttar Pradesh, India

Subjects: Physics, Chemistry, Mathematics, English

PROFESSIONAL EXPERIENCE

Over 12+ years of hands-on backend & systems engineering experience (2014 - Present).

Senior Software Engineer · Full-time

Waggingtail Technology Limited (waggingtail.co)

Oct 2018 - Present
Delhi, India · Remote

Lead backend engineer across several client products - responsible for backend direction, architecture, and keeping systems healthy as traffic and scope grow.

- Responsible for backend architecture, data modelling, and long-term system direction across multiple SaaS products and internal tools.
- Built and maintained REST APIs in Laravel and Go (Fiber), keeping contracts stable while features evolved.
- Introduced tenant isolation patterns and worked on multi-tenant setups where products needed to serve many customers safely.
- Reduced API response times and heavy report queries through better indexing, query rewrites, and benchmarking.
- Set up background workers, queues, and Redis so slow work didn't block the UI.
- Integrated payment providers and other third-party APIs in a way that failed predictably, not randomly.
- Managed deployments using GitHub CI/CD, Laravel Forge, AWS containers, DigitalOcean App Platform, and Vercel.
- Reviewed code and helped junior developers think in terms of long-lived systems, not just tickets.

Senior Programmer

Infoicon Technologies (infoicontechnologies.com)

Jun 2015 - Oct 2018
Noida, Uttar Pradesh, India

Backend-focused developer on multiple client projects, usually responsible for APIs and data-heavy parts of the system.

- Developed and maintained REST APIs for web applications.
- Designed backend modules with a focus on clear structure and maintainability.
- Wrote and tuned SQL queries to keep pages responsive.
- Implemented search and filtering features where needed.
- Integrated various third-party APIs and services.
- Handled background jobs and scheduled tasks for periodic work.

Sr. Web Developer

Webzesty Pvt Ltd (webzesty.net)

Apr 2014 - Jun 2015
Greater Delhi Area · On-site

Worked on full-stack web applications using PHP frameworks and JavaScript frontends.

- Developed backend features using Laravel and CodeIgniter.
- Designed and maintained MySQL schemas.
- Created REST-style endpoints for frontend integrations.
- Built frontend components with JavaScript and Vue.js.
- Fixed bugs, improved performance, and maintained existing applications.

Web Developer

SunHill Systems Pvt Ltd (sunhill.in)

Jan 2014 - Apr 2014
Greater Delhi Area · On-site

First role in web development, focused on server-side features and smaller enhancements.

- Developed and maintained backend features for web applications.
- Built and consumed REST APIs.
- Worked with databases to store and retrieve application data.
- Helped with bug fixes and small feature additions.
- Learned application architecture by working closely with senior developers.

FEATURED PROJECTS & SAAS PRODUCTS

Genexr Analytics

genexr.com

Product · Senior Backend Engineer (Founder)

Analytics and reporting layer for SaaS products. It exposes a clean API for sending events and gives each tenant its own dashboards, charts, and exports.

Tech Used: Go (Fiber) services behind a simple HTTP API, Next.js reporting dashboard, PostgreSQL schema tuned for analytics queries, Tenant-aware routing, auth, and data isolation, Background jobs for aggregations and exports

Fonefix Repair Management System

fonefix.co.nz

Digital Transformation · Senior Backend Engineer · Waggingtail

Backend behind a large device repair business - handles bookings, job state, technician updates, and the operational reporting the team runs their day on.

Tech Used: Workflow-driven backend design, Data modelling for the full repair lifecycle, Job and technician scheduling, Internal reporting for branches and teams

GigHQ

gighq.co.nz

Digital Businesses · Senior Backend Engineer · Waggingtail

Community and booking platform that connects musicians with hospitality venues, with feeds, profiles, and event workflows.

Tech Used: Community and booking workflows, Artist, venue, and event data modelling, Search across artists and gigs, Payment flows for bookings

AttendAssist

devravik.github.io/attendassist

Product · Independent Software Developer

play.google.com/store/apps/details?id=com.devravik.attendassist

Attendance management app focused on making the daily check-in/out process simple for teachers and teams.

Tech Used: React Native (Expo), Mobile-first API design, Attendance data modelling, Auth and role management, CI/CD for mobile and backend

KundaliLabs

kundalilabs.com

Product · Independent Software Developer

play.google.com/store/apps/details?id=com.kundalilabs.app
github.com/devravik/kundalilabs

AI-powered Vedic astrology platform using Swiss Ephemeris for all calculations and GPT-4o for interpretations. Covers Janam Kundli, daily horoscope, Panchang, Dasha timeline, Kundli matching, and numerology across 10 Indian languages. Available as a live web app and a mobile app on the Play Store.

Tech Used: FastAPI (Python) backend, React + Vite frontend, PostgreSQL, Swiss Ephemeris for Jyotish calculations, OpenAI GPT-4o for AI interpretations, React Native mobile app

Top Places India

topplacesindia.com

Product · Senior Backend Engineer

Travel discovery platform that helps people explore Indian destinations, itineraries, and lesser-known spots in one place.

Tech Used: Next.js application shell, Supabase / PostgreSQL data layer, Destination search and filters, Caching and incremental rendering

OPEN SOURCE CONTRIBUTIONS

Laravel Licensing

v1.0.0 · 1+ downloads · PHP ^8.1 · MIT

packagist.org/packages/devravik/laravel-licensing

github.com/devravik/laravel-licensing

A production-ready Laravel package for generating, managing, activating, and validating software licenses directly inside your application. License keys are hashed before storage (never plaintext in the database), activations are seat-controlled, and the entire lifecycle creation, validation, activation, revocation, and expiry is covered by typed exceptions and dispatchable events.

Tech Used: Laravel 10/11/12, Bcrypt key hashing, Seat-based activations, Polymorphic ownership, Event-driven architecture

Laravel Licensing Starter

github.com/devravik/laravel-licensing-starter

A starter kit demonstrating devravik/laravel-licensing - a Laravel package for generating, managing, activating, and validating software licenses. This project combines Laravel Breeze (authentication) with a full license management dashboard so you can see the complete workflow in action.

Tech Used: Laravel Breeze, License management dashboard, Full workflow demonstration, API endpoints, Demo data & examples

Laravel Extended Resources

github.com/devravik/extended-resources

packagist.org/packages/devravik/extended-resources

Extended Resources is a small but powerful extension around Laravel API resources that lets you define multiple named formats using PHP 8 attributes, apply on-the-fly modifications to the serialized data, use convenience enhancements like `only()/except()`, and adjust the HTTP status code directly from the resource while still feeling native to Laravel.

Tech Used: Laravel 10/11/12, PHP 8.1+, API Resources, PHP 8 attributes, Response helpers

RedditRadar

github.com/devravik/RedditRadar

Self-hosted Reddit lead discovery and AI analysis platform for engineers. Monitors subreddits for hiring posts and founder pain points, scores them against a custom engineer profile, pre-filters noise before any LLM inference runs, and tracks outreach through a full pipeline - a lightweight alternative to expensive SaaS lead tools.

Tech Used: Next.js 16 (App Router), Prisma 7 + PostgreSQL, Tailwind CSS + shadcn/ui, OpenAI / OpenRouter / Groq, Reddit JSON API

Go License API

github.com/devravik/go-license-api

High-performance, self-hosted license validation service built in Go. Covers everything from simple plugin licensing to large-scale SaaS enforcement: multi-tenant isolation, seat tracking, offline licenses (Ed25519), key rotation, webhooks, and audit logging. Validation runs entirely from an in-memory cache with no DB in the hot path, targeting sub-millisecond p95 latency.

Tech Used: Go 1.21+, PostgreSQL 14+, Redis (optional L2 cache), Ed25519 offline signing, Docker + Kubernetes

TalkBridge

github.com/devravik/TalkBridge

Real-time video calls with live AI-translated captions - no app, no account, just a link. Two people who speak different languages open a browser, share a link, and talk. Speech is transcribed via Deepgram Nova-2 with interim results and translated by Azure Cognitive Services in under 500ms end-to-end, overlaid as live captions on the video feed. Supports 10 languages with an LLM fallback for translation when Azure is unavailable.

Tech Used: Go (Fiber) + Gorilla WebSocket, Next.js 14, TypeScript, Tailwind CSS, WebRTC P2P video and audio, Deepgram Nova-2 streaming STT, Azure Cognitive Services Translator, PostgreSQL
