

RAVI K GUPTA

Senior Backend Engineer • Multi-Tenant SaaS Architecture

Email: dev.ravikgupt@gmail.com • Location: Delhi, India • Mobile: +91-8285893766

LinkedIn: linkedin.com/in/ravi-k-dev • GitHub: github.com/devravik • Portfolio: devravik.github.io

EXECUTIVE SUMMARY

I've been working on backend systems since 2014, mostly for SaaS products and web apps that can't afford to fall over when traffic spikes.

Day to day I'm in Laravel and Go (Fiber): designing APIs, shaping data models, and fixing the parts that usually hurt first - slow queries, missing indexes, noisy background jobs, and brittle integrations.

I like being close to the product and building backends that still make sense a few years later, not just for the next release. I'm open to remote backend roles and longer-term work with teams building real products.

TECHNICAL SKILLS & COMPETENCIES

BACKEND & ARCHITECTURE

Backend architecture and system design, Data modelling for real-world, messy domains, Tenant isolation strategies (shared and isolated), Horizontal scaling and performance tuning, Background processing pipelines and queues

LANGUAGES & FRAMEWORKS

PHP / Laravel, CodeIgniter, WordPress, Go (Golang, Fiber), JavaScript / TypeScript, Python (FastAPI), Node.js

FRONTEND & APPS

Vue.js, React, Next.js, React Native (Expo), Statamic

DATA & SEARCH

Relational database design (MySQL, PostgreSQL), Query optimisation and indexing, Analytics / reporting data models, Algolia, Meilisearch / Elasticsearch, Supabase, Neon

CLOUD, DEVOPS & RELIABILITY

AWS (S3, EC2, SES, RDS), DigitalOcean, Vercel, Docker & containers, GitHub Actions / CI/CD, Netlify, Caching layers and Redis, Observability and application monitoring

AI & DEV TOOLS

Claude (Anthropic), OpenAI / GPT-4o, DeepSeek, Cursor, OpenCode, Ollama (local LLMs), LangChain, Google (Gemini)

EDUCATION & ACADEMIC QUALIFICATIONS

Bachelor of Technology (B.Tech.)

2008 - 2012

Uttar Pradesh Technical University

Intermediate (Class XII)

2008

Board of High School and Intermediate Education Uttar Pradesh, India

Subjects: Physics, Chemistry, Mathematics, English

PROFESSIONAL EXPERIENCE

Over 12+ years of hands-on backend & systems engineering experience (2014 - Present).

Senior Software Engineer · Full-time

Oct 2018 - Present
Delhi, India · Remote

Waggingtail Technology Limited (waggingtail.co)

Lead backend engineer across several client products - responsible for backend direction, architecture, and keeping systems healthy as traffic and scope grow.

- Responsible for backend architecture, data modelling, and long-term system direction across multiple SaaS products and internal tools.
- Built and maintained REST APIs in Laravel and Go (Fiber), keeping contracts stable while features evolved.
- Introduced tenant isolation patterns and worked on multi-tenant setups where products needed to serve many customers safely.
- Reduced API response times and heavy report queries through better indexing, query rewrites, and benchmarking.
- Set up background workers, queues, and Redis so slow work didn't block the UI.
- Integrated payment providers and other third-party APIs in a way that failed predictably, not randomly.
- Managed deployments using GitHub CI/CD, Laravel Forge, AWS containers, DigitalOcean App Platform, and Vercel.
- Reviewed code and helped junior developers think in terms of long-lived systems, not just tickets.

Senior Programmer

Jun 2015 - Oct 2018
Noida, Uttar Pradesh, India

Infoicon Technologies (infoicontechnologies.com)

Backend-focused developer on multiple client projects, usually responsible for APIs and data-heavy parts of the system.

- Developed and maintained REST APIs for web applications.
- Designed backend modules with a focus on clear structure and maintainability.
- Wrote and tuned SQL queries to keep pages responsive.
- Implemented search and filtering features where needed.
- Integrated various third-party APIs and services.
- Handled background jobs and scheduled tasks for periodic work.

Sr. Web Developer

Apr 2014 - Jun 2015
Greater Delhi Area · On-site

Webzesty Pvt Ltd (webzesty.net)

Worked on full-stack web applications using PHP frameworks and JavaScript frontends.

- Developed backend features using Laravel and CodeIgniter.
- Designed and maintained MySQL schemas.
- Created REST-style endpoints for frontend integrations.
- Built frontend components with JavaScript and Vue.js.
- Fixed bugs, improved performance, and maintained existing applications.

Web Developer

Jan 2014 - Apr 2014
Greater Delhi Area · On-site

SunHill Systems Pvt Ltd (sunhill.in)

First role in web development, focused on server-side features and smaller enhancements.

- Developed and maintained backend features for web applications.
- Built and consumed REST APIs.
- Worked with databases to store and retrieve application data.
- Helped with bug fixes and small feature additions.
- Learned application architecture by working closely with senior developers.

FEATURED PROJECTS & SAAS PRODUCTS

Genexr Analytics

genexr.com

Product · Senior Backend Engineer (Founder)

Analytics and reporting layer for SaaS products. It exposes a clean API for sending events and gives each tenant its own dashboards, charts, and exports.

Tech Used: Go (Fiber) services behind a simple HTTP API, Next.js reporting dashboard, PostgreSQL schema tuned for analytics queries, Tenant-aware routing, auth, and data isolation, Background jobs for aggregations and exports

Fonefix Repair Management System

fonefix.co.nz

Digital Transformation · Senior Backend Engineer · Waggingtail

Backend behind a large device repair business - handles bookings, job state, technician updates, and the operational reporting the team runs their day on.

Tech Used: Workflow-driven backend design, Data modelling for the full repair lifecycle, Job and technician scheduling, Internal reporting for branches and teams

GigHQ

gighq.co.nz

Digital Businesses · Senior Backend Engineer · Waggingtail

Community and booking platform that connects musicians with hospitality venues, with feeds, profiles, and event workflows.

Tech Used: Community and booking workflows, Artist, venue, and event data modelling, Search across artists and gigs, Payment flows for bookings

Planolitix

planolitix.com

Financial Tools · Senior Backend Engineer · Waggingtail

Financial diagnostic tool that uses cashflow modelling to show clients how their position changes across different life stages.

Tech Used: Financial data modelling, Long-horizon cashflow calculations, Graph-based reporting, Performance-focused SQL tuning

Moneyguide

moneyguide.co.nz

Financial Tools · Senior Backend Engineer · Waggingtail

Retirement and planning tool that lets advisers compare scenarios and generate client-friendly reports.

Tech Used: Scenario modelling for retirement planning, Adviser-facing reporting and exports, Document generation and summaries, Secure handling of client data

Skillsnacks

skillsnacks.com

Digital Learning · Senior Backend Engineer · Waggingtail

Microlearning platform for retail sales teams, with snack-sized lessons and coaching activities behind a subscription model.

Tech Used: Subscription access model, Learning content and assessment data structures, Engagement and progress tracking, Multi-tenant delivery for different brands

Vetty

vetty.co.nz

Digital Businesses · Senior Backend Engineer · Waggingtail

Subscription e-commerce platform for pet treatments, handling recurring orders, billing, and fulfilment.

Tech Used: Subscription billing engine, Order and fulfilment workflows, Inventory and logistics integrations, Customer notification flows

AttendAssist

Product · Independent Software Developer

devravik.github.io/attendassist
play.google.com/store/apps/details?id=com.devravik.attendassist

Attendance management app focused on making the daily check-in/out process simple for teachers and teams.

Tech Used: React Native (Expo), Mobile-first API design, Attendance data modelling, Auth and role management, CI/CD for mobile and backend

KundaliLabs

Product · Independent Software Developer

kundalilabs.com
play.google.com/store/apps/details?id=com.kundalilabs.app
github.com/devravik/kundalilabs

AI-powered Vedic astrology platform using Swiss Ephemeris for all calculations and GPT-4o for interpretations. Covers Janam Kundli, daily horoscope, Panchang, Dasha timeline, Kundli matching, and numerology across 10 Indian languages. Available as a live web app and a mobile app on the Play Store.

Tech Used: FastAPI (Python) backend, React + Vite frontend, PostgreSQL, Swiss Ephemeris for Jyotish calculations, OpenAI GPT-4o for AI interpretations, React Native mobile app

RedditRadar

Open Source · Independent Software Developer

github.com/devravik/RedditRadar

Self-hosted Reddit lead discovery and AI analysis platform. Monitors configurable subreddits for hiring posts and founder pain points, scores them against a custom engineer profile, pre-filters noise before LLM inference runs, and tracks outreach through a NEW → CONTACTED → REPLIED → ARCHIVED pipeline.

Tech Used: Next.js 16 (App Router), Prisma 7 + PostgreSQL, Tailwind CSS + shadcn/ui, AI scoring via OpenAI / OpenRouter / Groq, Reddit JSON API with rate-limit-aware pacing, Docker + self-hosted deployment

Go License API

Open Source · Independent Software Developer

github.com/devravik/go-license-api

High-performance, self-hosted license validation service built in Go. Designed for SaaS products, desktop apps, plugins, and indie tools - handles multi-tenant isolation, seat-based licensing, offline Ed25519 verification, webhooks, audit logging, and key rotation. Validation runs entirely from an in-memory L1 cache with no DB in the hot path.

Tech Used: Go 1.21+, PostgreSQL 14+ (control plane only), Redis (optional L2 cache), Ed25519 offline license signing, Worker pool + bounded queue, Docker + Kubernetes

Top Places India

Product · Senior Backend Engineer

topplacesindia.com

Travel discovery platform that helps people explore Indian destinations, itineraries, and lesser-known spots in one place.

Tech Used: Next.js application shell, Supabase / PostgreSQL data layer, Destination search and filters, Caching and incremental rendering

TalkBridge

Open Source · Independent Software Developer

github.com/devravik/TalkBridge

Real-time video calls with live AI-translated captions - no app, no account, just a link. Audio streams through WebRTC P2P while Deepgram Nova-2 transcribes speech with interim results, Azure Cognitive Services translates in ~50-150ms, and captions are pushed back over WebSocket in under 500ms end-to-end. Supports 10 languages with an LLM fallback translation path.

Tech Used: Go (Fiber) + Gorilla WebSocket, Next.js 14, TypeScript, Tailwind CSS, WebRTC P2P (STUN/TURN), Deepgram Nova-2 streaming STT, Azure Cognitive Services Translator, PostgreSQL + Docker

OPEN SOURCE CONTRIBUTIONS

Laravel Licensing

packagist.org/packages/devravik/laravel-licensing

github.com/devravik/laravel-licensing

A production-ready Laravel package for generating, managing, activating, and validating software licenses directly inside your application. License keys are hashed before storage (never plaintext in the database), activations are seat-controlled, and the entire lifecycle creation, validation, activation, revocation, and expiry is covered by typed exceptions and dispatchable events.

Tech Used: Laravel 10/11/12, Bcrypt key hashing, Seat-based activations, Polymorphic ownership, Event-driven architecture

Laravel Licensing Starter

github.com/devravik/laravel-licensing-starter

A starter kit demonstrating devravik/laravel-licensing - a Laravel package for generating, managing, activating, and validating software licenses. This project combines Laravel Breeze (authentication) with a full license management dashboard so you can see the complete workflow in action.

Tech Used: Laravel Breeze, License management dashboard, Full workflow demonstration, API endpoints, Demo data & examples

Laravel Extended Resources

github.com/devravik/extended-resources

packagist.org/packages/devravik/extended-resources

Extended Resources is a small but powerful extension around Laravel API resources that lets you define multiple named formats using PHP 8 attributes, apply on-the-fly modifications to the serialized data, use convenience enhancements like `only()/except()`, and adjust the HTTP status code directly from the resource while still feeling native to Laravel.

Tech Used: Laravel 10/11/12, PHP 8.1+, API Resources, PHP 8 attributes, Response helpers

RedditRadar

github.com/devravik/RedditRadar

Self-hosted Reddit lead discovery and AI analysis platform for engineers. Monitors subreddits for hiring posts and founder pain points, scores them against a custom engineer profile, pre-filters noise before any LLM inference runs, and tracks outreach through a full pipeline - a lightweight alternative to expensive SaaS lead tools.

Tech Used: Next.js 16 (App Router), Prisma 7 + PostgreSQL, Tailwind CSS + shadcn/ui, OpenAI / OpenRouter / Groq, Reddit JSON API

Go License API

github.com/devravik/go-license-api

High-performance, self-hosted license validation service built in Go. Covers everything from simple plugin licensing to large-scale SaaS enforcement: multi-tenant isolation, seat tracking, offline licenses (Ed25519), key rotation, webhooks, and audit logging. Validation runs entirely from an in-memory cache with no DB in the hot path, targeting sub-millisecond p95 latency.

Tech Used: Go 1.21+, PostgreSQL 14+, Redis (optional L2 cache), Ed25519 offline signing, Docker + Kubernetes

TalkBridge

github.com/devravik/TalkBridge

Real-time video calls with live AI-translated captions - no app, no account, just a link. Two people who speak different languages open a browser, share a link, and talk. Speech is transcribed via Deepgram Nova-2 with interim results and translated by Azure Cognitive Services in under 500ms end-to-end, overlaid as live captions on the video feed. Supports 10 languages with an LLM fallback for translation when Azure is unavailable.

Tech Used: Go (Fiber) + Gorilla WebSocket, Next.js 14, TypeScript, Tailwind CSS, WebRTC P2P video and audio, Deepgram Nova-2 streaming STT, Azure Cognitive Services Translator, PostgreSQL
